Manifolds with complete metrics of positive scalar curvature

Shmuel Weinberger Joint work with Stanley Chang and Guoliang Yu

May 5-14, 2008

◆□▶ ◆□▶ ◆□▶ ◆□▶ → □ ◇ ◇ ◇

Fact

If S_p is the scalar curvature at a point p in a manifold M^n , then

$$\mathsf{Vol}_{\mathcal{M}}\left(B_{\epsilon}\left(p
ight)
ight)=\mathsf{Vol}_{\mathbb{R}^{n}}(B_{\epsilon})-S_{p}\cdot C\epsilon^{n+2}+\cdots$$

▲□▶ ▲□▶ ▲□▶ ▲□▶ ▲□ ● ● ●

Fact

If S_p is the scalar curvature at a point p in a manifold M^n , then

$$\mathsf{Vol}_{M}\left(B_{\epsilon}\left(p
ight)
ight)=\mathsf{Vol}_{\mathbb{R}^{n}}(B_{\epsilon})-S_{p}\cdot C\epsilon^{n+2}+\cdots$$

Remark (Kazhdan-Warner)

Suppose M is a compact n-manifold with n > 2.

Fact

If S_p is the scalar curvature at a point p in a manifold M^n , then

$$\mathsf{Vol}_{M}\left(B_{\epsilon}\left(p
ight)
ight)=\mathsf{Vol}_{\mathbb{R}^{n}}(B_{\epsilon})-S_{p}\cdot C\epsilon^{n+2}+\cdots$$

Remark (Kazhdan-Warner)

Suppose M is a compact n-manifold with n > 2.

 If f : M → ℝ is a function with f(p) < 0 for some p ∈ M, then there is a metric g so that f(p) is the scalar curvature of (M,g) at p.

Fact

If S_p is the scalar curvature at a point p in a manifold M^n , then

$$\mathsf{Vol}_{M}\left(B_{\epsilon}\left(p
ight)
ight)=\mathsf{Vol}_{\mathbb{R}^{n}}(B_{\epsilon})-S_{p}\cdot C\epsilon^{n+2}+\cdots$$

Remark (Kazhdan-Warner)

Suppose M is a compact n-manifold with n > 2.

- If f : M → ℝ is a function with f(p) < 0 for some p ∈ M, then there is a metric g so that f(p) is the scalar curvature of (M,g) at p.
- If there is a metric g with positive scalar curvature, then any function $f : M \to \mathbb{R}$ is the scalar curvature of some metric.

Fact

If S_p is the scalar curvature at a point p in a manifold M^n , then

$$\mathsf{Vol}_{M}\left(B_{\epsilon}\left(p
ight)
ight)=\mathsf{Vol}_{\mathbb{R}^{n}}(B_{\epsilon})-S_{p}\cdot C\epsilon^{n+2}+\cdots$$

Remark (Gauss-Bonnet)

If a surface Σ^2 has a complete metric of positive scalar curvature, then $\Sigma^2 \cong S^2$ or $\Sigma^2 \cong \mathbb{R}P^2$.

▲ロト ▲母 ト ▲目 ト ▲目 ト → 目 → のへの

Theorem (Atiyah-Singer, due to Lichnerowicz)

Example ($\mathbb{C}P^2$)

- $\mathbb{C}P^2$ has a metric with positive scalar curvature,
- sign $\mathbb{C}P^2 = 1$,
- $\mathbb{C}P^2$ is not spin.

Theorem (Atiyah-Singer, due to Lichnerowicz)

If M^n is a compact spin manifold admitting a metric of positive scalar curvature, then

$$\langle \hat{A}(M), [M] \rangle = 0.$$

Idea of Proof:

Theorem (Atiyah-Singer, due to Lichnerowicz)

If M^n is a compact spin manifold admitting a metric of positive scalar curvature, then

 $\langle \hat{A}(M), [M] \rangle = 0.$

(日) (同) (日) (日)

Idea of Proof:

Since *M* is spin, *M* has a Dirac operator \mathcal{D} .

Theorem (Atiyah-Singer, due to Lichnerowicz)

If M^n is a compact spin manifold admitting a metric of positive scalar curvature, then

$$\langle \hat{A}(M), [M] \rangle = 0.$$

Idea of Proof:

Since *M* is spin, *M* has a Dirac operator \mathcal{P} .

$$ot\!\!\!D^{\star}
ot\!\!\!D = \Delta + \mathsf{Scal}.$$

Theorem (Atiyah-Singer, due to Lichnerowicz)

If M^n is a compact spin manifold admitting a metric of positive scalar curvature, then

 $\langle \hat{A}(M), [M] \rangle = 0.$

Idea of Proof:

Since *M* is spin, *M* has a Dirac operator \mathcal{D} .

$$\mathcal{D}^{\star}\mathcal{D} = \Delta + \text{Scal.}$$

(日) (同) (日) (日)

If Scal > 0, then $\Delta + Scal > 0$,

Theorem (Atiyah-Singer, due to Lichnerowicz)

If M^n is a compact spin manifold admitting a metric of positive scalar curvature, then

 $\langle \hat{A}(M), [M] \rangle = 0.$

Idea of Proof:

Since *M* is spin, *M* has a Dirac operator \mathcal{P} .

$$\mathcal{D}^{\star}\mathcal{D} = \Delta + \text{Scal.}$$

If Scal > 0, then Δ + Scal > 0, then ker $D^{\star} =$ 0 and ker D = 0,

Theorem (Atiyah-Singer, due to Lichnerowicz)

If M^n is a compact spin manifold admitting a metric of positive scalar curvature, then

 $\langle \hat{A}(M), [M] \rangle = 0.$

Idea of Proof:

Since *M* is spin, *M* has a Dirac operator \mathcal{P} .

$$\mathcal{D}^{\star}\mathcal{D} = \Delta + \text{Scal.}$$

If Scal > 0, then $\Delta + \text{Scal} > 0$, then ker $\not D^* = 0$ and ker $\not D = 0$, then ind $\not D = \text{ker } \not D - \text{ker } \not D^* = 0$,

Theorem (Atiyah-Singer, due to Lichnerowicz)

If Mⁿ is a compact spin manifold admitting a metric of positive scalar curvature, then

 $\langle \hat{A}(M), [M] \rangle = 0.$

Idea of Proof:

Since *M* is spin, *M* has a Dirac operator \mathcal{P} .

$$\mathcal{D}^{\star}\mathcal{D} = \Delta + \text{Scal.}$$

If Scal > 0, then Δ + Scal > 0, then ker $\not{D}^* = 0$ and ker $\not{D} = 0$, then ind $\not{D} = \ker \not{D} - \ker \not{D}^* = 0$, so $\langle \hat{A}(M), [M] \rangle = 0$ by Atiyah-Singer.

If M^n with n > 4 and M simply connected, then M has a metric of positive scalar curvature iff

Proof:

• DW = double of Whitehead manifold along T^2

- DW = double of Whitehead manifold along T^2
- *DW* has a positive scalar curvature metric except at $A \cup \overline{A}$

- DW = double of Whitehead manifold along T^2
- *DW* has a positive scalar curvature metric except at $A \cup \overline{A}$
- DW has positive scalar curvature metric at infinity

- DW = double of Whitehead manifold along T^2
- *DW* has a positive scalar curvature metric except at $A \cup \overline{A}$
- DW has positive scalar curvature metric at infinity—a contradiction.

Digression: Roe's Partition Manifold Theorem.

Theorem (Roe)

If V is spin and Z positive scalar curvature at infinity, then ind = 0.

◆□▶ ◆□▶ ◆三▶ ◆三▶ ○三 ○○○○

Digression: Roe's Partition Manifold Theorem.

Theorem (Roe)

If V is spin and Z positive scalar curvature at infinity, then ind = 0.

Modern Philosophy

The partition defines a virtual vector bundle on the space at infinity.

Digression: Roe's Partition Manifold Theorem.

Theorem (Roe)

If V is spin and Z positive scalar curvature at infinity, then ind = 0.

Modern Philosophy

The partition defines a virtual vector bundle on the space at infinity. Only the ends of the space at infinity are independent of the quasi-isometry class of the metric.

If V is not simply connected, attractive to couple Roe's theorem to $C^{\star}(\pi_1 V)$.

◆□▶ ◆□▶ ◆三▶ ◆三▶ 三三 のへで

If V is not simply connected, attractive to couple Roe's theorem to $C^*(\pi_1 V)$. In this case, $V = T^2$.

▲□▶ ▲□▶ ▲□▶ ▲□▶ ▲□ ● ● ●

If V is not simply connected, attractive to couple Roe's theorem to $C^*(\pi_1 V)$. In this case, $V = T^2$.

But $[\mathcal{P}] \in \mathcal{K}_2(T^2)$ dies on pushing forward by $\mathcal{K}_2(T^2) \to \mathcal{K}_2(\mathsf{pt})$,

If V is not simply connected, attractive to couple Roe's theorem to $C^*(\pi_1 V)$. In this case, $V = T^2$.

But $[\mathcal{P}] \in K_2(T^2)$ dies on pushing forward by $K_2(T^2) \to K_2(\text{pt})$, so \mathcal{P} on T^2 does not obstruct positive scalar curvature.

If V is not simply connected, attractive to couple Roe's theorem to $C^*(\pi_1 V)$. In this case, $V = T^2$.

But $[\mathcal{P}] \in \mathcal{K}_2(\mathcal{T}^2)$ dies on pushing forward by $\mathcal{K}_2(\mathcal{T}^2) \to \mathcal{K}_2(\text{pt})$, so \mathcal{P} on \mathcal{T}^2 does not obstruct positive scalar curvature.

On the other hand, $K_2(T^2) \to K_2(C^*(\mathbb{Z}^2))$ is injective.

Tilt horizontal direction to the vertical.

Idea

Use
$$\pi_1(DW)$$
 rather than $\pi_1(T^2) = \mathbb{Z}^2$.

Question

Do we know strong Novikov conjecture for $\pi_1(DW)$?

DW aspherical.

Theorem (Connes-Gromov-Mascovicci)

Novikov conjecture holds for all 2-dimensional cohomology classes.

Theorem

If M^3 is of finite type and has positive scalar curvature at infinity, then M is the interior of a manifold with boundary.

Theorem

If M^3 is of finite type and has positive scalar curvature at infinity, then M is the interior of a manifold with boundary.

Example

$$S^3$$
 – cantor set = $\widetilde{L^3 \# L^3}$.

Proof:

Whitehead case applies.

Theorem

If M^3 is of finite type and has positive scalar curvature at infinity, then M is the interior of a manifold with boundary.

▲ロト ▲母 ト ▲目 ト ▲目 ト → 目 → のへの

Example

$$S^3$$
 – cantor set = $\widetilde{L^3 \# L^3}$.

Proof:

Whitehead case applies. Perelman is used

Theorem

If M^3 is of finite type and has positive scalar curvature at infinity, then M is the interior of a manifold with boundary.

Example

$$S^3$$
 – cantor set = $\widetilde{L^3 \# L^3}$.

Proof:

Whitehead case applies.

Perelman is used—though Hamilton is probably enough.
